RE: Facility ID No. 023-00001, 011-00022, Idaho National Laboratory, Idaho Falls
(Final Tier I Operating Permit)

Dear Mr. Rasch:

The Idaho Department of Environmental Quality (DEQ) is issuing Tier I Operating Permit No. T1-060508 for the Idaho National Laboratory Site in accordance with IDAPA 58.01.01.300 through 386, Rules for the Control of Air Pollution in Idaho (Rules).

The enclosed permit is effective immediately, summarizes the applicable requirements for your facility, and requires an annual compliance certification for all emissions units. This permit replaces Tier I Operating Permit No. T1-030520, issued June 28, 2005, the terms and conditions of which shall no longer apply. The enclosed operating permit is based on the information contained in your permit application received April 7, 2006. Modifications to and/or renewal of this operating permit shall be requested in a timely manner in accordance with the Rules.

Since this project does not significantly change the terms of your permit, DEQ will not contact you regarding a meeting to discuss the terms of the permit. However, if you wish to meet to discuss the permit terms and requirements, you may contact Rensay Owen of the Idaho Falls Regional Office to schedule a meeting. If a meeting is scheduled, DEQ recommends the following representatives attend the meeting: your facility's plant manager, responsible official, environmental contact, and any operations staff responsible for day-to-day compliance with permit conditions.

Pursuant to IDAPA 58.01.23, you, as well as any other entity, may have the right to appeal this final agency action within 35 days of the date of this decision. However, prior to filing a petition for a contested case, I encourage you to call Dan Pitman, Permit Coordinator at (208) 373-0502 to address any questions or concerns you may have with the enclosed permit.

Sincerely,

Martin Bauer, Administrator
Air Quality Division

8. PERMIT AUTHORITY

This Tier I operating permit is issued pursuant to Idaho Code §39-115 and the Rules for the Control of Air Pollution in Idaho, IDAPA 58.01.01.300 through 386. The permittee shall comply with the terms and conditions of this permit.

This permit incorporates all applicable terms and conditions of prior air quality permits issued by the Idaho Department of Environmental Quality (DEQ) for the permitted source, unless the permittee emits toxic pollutants subject to state-only requirements pursuant to IDAPA 58.01.01.210, and the permittee elects not to incorporate those terms and conditions into this operating permit.

The effective date of this permit is the date of signature by DEQ on the cover page.

1. TIER I OPERATING PERMIT SCOPE

Purpose

- 1.1 This initial Tier I operating permit establishes facility-wide requirements in accordance with the Rules for the Control of Air Pollution in Idaho.
- 1.2 This Tier I permit incorporates the applicable terms and conditions of the PTC's listed below. These existing PTC's remain in effect.

Materials and Fuels Complex (MFC, formerly ANL-W)

- PTC No. 011-00022 issued August 26, 2000, for the Sodium Process Facility
- PTC No. 011-00022 issued May 9, 2001, for the FCF
- PTC No. 011-00022 issued February 20, 2003, for the Utility Spray Paint Booth
- PTC No. P-020521 issued December 1, 2003, PTC, INL-wide NO_x sources were permitted. Sources of NO_x within MFC include four boilers

Central Facilities Area

- PTC No. 023-00001 issued February 14, 1996, for the Cleaver Brooks boiler CB-101-50
- PTC No. P-020521 issued December 1, 2003, issued to permit INL-wide NO_x sources. Sources of NO_x within CFA include the following boilers: CFA-650 B-25, CFA-662 B-28 and B-35 (one stack); CFA-671 B-33 and B-34 (one stack); and CFA-688 B-101 and B-102 (one stack)

Idaho Nuclear Technology and Engineering Center

- PTC No. 023-00001 issued April 5, 1996, reconfiguration of the fuel storage portion of the FAST facility
- PTC No. 023-00001 issued December 17, 1997, New Waste Calcining Facility/Decontamination Area
- PTC No. 023-00001 issued March 4, 1998, building the waste storage facility (CPP-1619)
- PTC No. P-020521 issued December 1, 2003, permit included requirements for the FAST facility, LET&D, ventilation air system, process off-gas system, and facility-wide NO_x sources
- PTC No. P-030505 issued January 21, 2004, four distillate oil-fired boilers (CPP-606)

Critical Infrastructure Test Range Complex/ Power Burst Facility (Formerly WROC)

- PTC No. P-020521 issued December 1, 2003, contains NO_x emission limits for several boilers at the INL. The CITRC/PBF boiler in this permit is the Cyclotherm boiler PBF-620 M-31

Naval Reactors Facility

- PTC No. P-020521 issued December 1, 2003 (NRF Portion only)

Test Area North

- PTC No. 023-00001 issued May 14, 1998, for boilers at TAN 603
- PTC No. P-030501 issued May 20, 2004, for the SMC

Reactor Technology Complex (formerly TRA)

- PTC No. 023-00001 issued September 9, 2002, for the warm wastewater evaporation pond
- PTC No. P-000534 issued May 18, 2004, issued for three electrical generators

Radioactive Waste Management Complex

- None- see AMWTP

Advanced Mixed Waste Treatment Project

- PTC No. 023-00001 issued June 7, 2002, for the AMWTF
- PTC No. 023-00001 issued January 27, 2003, for the TSA-RE
- PTC No. P-030542 issued December 19, 2003, for the TSA-RE standby generator

Fugitive Dust

- 2.1 All reasonable precautions shall be taken to prevent particulate matter from becoming airborne in accordance with the Rules for Control of Fugitive dust IDAPA 58.01.01.650-651.
[IDAPA 58.01.01.650, 651, 5/1/94]
- 2.2 The permittee shall monitor and maintain records of the frequency and the method(s) used (i.e., water, chemical dust suppressants, etc.) to reasonably control fugitive dust emissions.
[IDAPA 58.01.01.322.06, 07, 5/1/94]
- 2.3 The permittee shall maintain records of all fugitive dust complaints received by the facility. The permittee shall take appropriate corrective action as expeditiously as practicable after receipt of a valid complaint. The records shall, at a minimum, include the date each complaint was received and a description of the following: the complaint, the permittee's assessment of the validity of the complaint, any corrective action taken, and the date the corrective action was taken.
[IDAPA 58.01.01.322.06, 07, 5/1/94]
- 2.4 The permittee shall conduct a quarterly facility-wide inspection of potential sources of fugitive dust emissions, during daylight hours and under normal operating conditions, to ensure that the methods used to reasonably control fugitive dust emissions are effective. If fugitive dust emissions are not being reasonably controlled, the permittee shall take corrective action as expeditiously as practicable. The permittee shall maintain records of the results of each quarterly fugitive dust emission inspection. The records shall, at a minimum, include the date of each inspection and a description of the following: the permittee's assessment of the conditions existing at the time fugitive dust emissions were present (if observed), any corrective action taken in response to the fugitive dust emissions, and the date the corrective action was taken.

Notwithstanding IDAPA 58.01.01.157, no prior notification is required for inspections of potential source for fugitive dust emissions required by this section of the permit.

[IDAPA 58.01.01.322.06, 07, 5/1/94; IDAPA 58.01.01.322.08, 4/5/00]

Visible Emissions

- 2.5 No person shall discharge any air pollutant to the atmosphere from any point of emission for a period or periods aggregating more than three minutes in any 60-minute period which is greater than 20% opacity as determined by procedures contained in IDAPA 58.01.01.625. These provisions shall not apply when the presence of uncombined water, nitrogen oxides, and/or chlorine gas are the only reason(s) for the failure of the emissions to comply with the requirements of this section.
[IDAPA 58.01.01.625, 4/5/00]
- 2.6 The permittee shall conduct a quarterly facility-wide inspection of potential sources of visible emissions, during daylight hours and under normal operating conditions. The visible emissions inspection shall consist of a see/no see evaluation for each potential source of visible emissions. If any visible emissions are present from any point of emission, the permittee shall either take appropriate corrective action as expeditiously as practicable, or perform a Method 9 opacity test in accordance with the procedures outlined in IDAPA 58.01.01.625. A minimum of 30 observations shall be

recorded when conducting the opacity test. If opacity is greater than 20% for a period or periods aggregating more than three minutes in any 60-minute period, the permittee shall take all necessary corrective action and report the exceedance in its annual compliance certification and in accordance with IDAPA 58.01.01.130-136. The permittee shall maintain records of the results of each quarterly visible emission inspection and each opacity test when conducted. The records shall include, at a minimum, the date and results of each inspection and test and a description of the following: the permittee's assessment of the conditions existing at the time visible emissions are present (if observed), any corrective action taken in response to the visible emissions, and the date corrective action was taken.

Notwithstanding IDAPA 58.01.01.157, no prior notification is required for see/no see evaluations or Method 9 opacity tests required by this section of the permit.

Excess Emissions

- 2.7 Unless specified elsewhere in this permit, the permittee shall comply with the procedures and requirements of IDAPA 58.01.01.130-136 for excess emissions. The provisions of IDAPA 130-136 shall govern in the event of conflicts between the subsections of Permit Condition 2.7 and the regulations of IDAPA 130-136.

[IDAPA 58.01.01.130-136, 4/5/00]

- 2.7.1 The person responsible for or in charge of a facility during an excess emissions event shall, with all practicable speed, initiate and complete appropriate and reasonable action to correct the conditions causing such excess emissions event; to reduce the frequency of occurrence of such events; to minimize the amount by which the emission standard is exceeded; and shall, as provided below or upon request of DEQ, submit a full report of such occurrence, including a statement of all known causes, and of the scheduling and nature of the actions to be taken.

[IDAPA 58.01.01.132, 4/5/00]

- 2.7.2 In all cases where startup, shutdown, or scheduled maintenance of any equipment or emission unit is expected to result or results in an excess emissions event, the owner or operator of the facility or emissions unit generating the excess emissions shall demonstrate compliance with IDAPA 58.01.01.133.01(a) through (d), including, but not limited to, the following:

[IDAPA 58.01.01.133, 4/5/00]

- 2.7.2.1 No scheduled startup, shutdown, or maintenance resulting in excess emissions shall occur during any period in which an Atmospheric Stagnation Advisory and/or a Wood Stove Curtailment Advisory has been declared by DEQ, for the area where the source is located, within an area designated as a PM-10 nonattainment area.

[IDAPA 58.01.01.133.01.a, 3/20/97]

- 2.7.2.2 Notifying DEQ of scheduled excess emissions event as soon as reasonably possible, but no later than two hours prior to the start of the excess emission event, unless the owner or operator demonstrates to DEQ's satisfaction that a shorter advanced notice was necessary.

- 2.7.2.3 The owner or operator of a source of excess emissions shall report and record the information required pursuant to Permit Conditions 2.7.4 and 2.7.5 and IDAPA 58.01.01.135 and 136 for each excess emissions event due to startup, shutdown, or scheduled maintenance.

[IDAPA 58.01.01.133.01.c, 3/20/97]

- 2.7.3 In all cases where upset or breakdown of equipment or an emissions unit, or the initiation of safety measures, results or may result in an excess emissions event, the owner or operator of the facility or emissions unit generating the excess emissions shall demonstrate compliance with IDAPA 58.01.01.134.01(a) and (b) and the following:

[IDAPA 58.01.01.134, 4/5/00]

- 2.7.3.1 For all equipment or emissions units from which excess emissions result during upset or breakdown conditions, or for other situations that may necessitate the implementation of safety measures which cause excess emissions, the facility owner or operator shall comply with the following:

[IDAPA 58.01.01.134.02, 4/5/00]

The owner or operator shall immediately undertake all appropriate measures to reduce and, to the extent possible, eliminate excess emissions resulting from the event and to minimize the impact of such excess emissions on the ambient air quality and public health.

[IDAPA 58.01.01.134.02.a, 4/5/00]

The owner or operator shall notify DEQ of any upset, breakdown, or safety event that results in excess emissions. Such notification shall identify the time, specific location, equipment or emissions unit involved, and (to the extent known) the cause(s) of the occurrence. The notification shall be given as soon as reasonably possible, but no later than 24 hours after the event, unless the owner or operator demonstrates to DEQ's satisfaction that the longer reporting period was necessary.

[IDAPA 58.01.01.134.02.b, 4/5/00]

The owner or operator shall report and record the information required pursuant to Permit Conditions 2.7.4 and 2.7.5 and IDAPA 58.01.01.135 and 136 for each excess emissions event caused by an upset, breakdown, or safety measure.

[IDAPA 58.01.01.134.02.c, 3/20/97]

- 2.7.3.2 During any period of excess emissions caused by upset, breakdown, or operation under facility safety measures, DEQ may require the owner or operator to immediately reduce or cease operation of the equipment or emissions unit causing the excess emissions until such time as the condition causing the excess emissions has been corrected or brought under control. Such action by DEQ shall be taken upon consideration of the factors listed in IDAPA 58.01.01.134.03 and after consultation with the facility owner or operator.

[IDAPA 58.01.01.134.03, 4/5/00]

- 2.7.4 A written report for each excess emissions event shall be submitted to DEQ by the owner or operator no later than 15 days after the beginning of such an event. Each report shall contain the information specified in IDAPA 58.01.01.135.02.

The excess emissions records shall include the information requested by IDAPA 58.01.01.136.03(a) and (b) as summarized in the following:

[IDAPA 58.01.01.136.01, 02, 3/20/97; IDAPA 58.01.01.136.03, 4/5/00]

- 2.7.5.1 An excess emissions record book for each emissions unit or piece of equipment containing copies of all reports that have been submitted to DEQ pursuant to IDAPA 58.01.01.135 for the particular emissions unit or equipment.

[IDAPA 58.01.01.136.03.a, 4/5/00]

- 2.7.5.2 Copies of all startup, shutdown, and scheduled maintenance procedures and upset, breakdown, and safety preventative maintenance plans that have been developed by the owner or operator in accordance with IDAPA 58.01.01.133 and 134, and facility records as necessary to demonstrate compliance with such procedures and plans.

[IDAPA 58.01.01.136.03.b, 3/20/97]

Open Burning

- 2.8 The permittee shall comply with the requirements of IDAPA 58.01.01.600-616, Rules for Control of Open Burning.

[IDAPA 58.01.01.600-616, 5/1/94]

Fuel-Burning Equipment

- 2.9 The permittee shall not discharge to the atmosphere from any fuel-burning equipment particulate matter in excess of 0.015 grains per dry standard cubic foot (gr/dscf) of effluent gas corrected to 3% oxygen by volume for gas, or 0.050 gr/dscf of effluent gas corrected to 3% oxygen by volume for liquid.

[IDAPA 58.01.01.676, 677, 5/1/94]

- 2.9.1 The permittee shall maintain records of the fuel-type procured for boiler use.

[IDAPA 58.01.01.322.07, 5/1/94]

Sulfur Content

- 2.10 No person shall sell, distribute, use, or make available for use any fuel oil containing more than the following percentages of sulfur:

- Residual fuel oil - 1.75% by weight
- ASTM Grade 1 fuel oil - 0.3% by weight
- ASTM Grade 2 fuel oil - 0.5% by weight

Particulate Matter - Process Weight Limitations

- 2.11 No person shall emit to the atmosphere from any process or process equipment operating prior to October 1, 1979, particulate matter in excess of the amount shown by the following equations, where E is the allowable emission from the entire source in pounds per hour (lb/hr), and PW is the process weight in pounds per hour:

- a. If PW is less than 17,000 lb/hr,
 $E = 0.045(PW)^{0.60}$
- b. If PW is equal to or greater than 17,000 lb/hr,
 $E = 1.12(PW)^{0.27}$

No person shall emit to the atmosphere from any process or process equipment operating on or after October 1, 1979, particulate matter in excess of the amount shown by the following equations, where E is the allowable emission from the entire source in pounds per hour, and PW is the process weight in pounds per hour.

- a. If PW is less than 9,250 lb/hr,
 $E = 0.045(PW)^{0.60}$
- b. If PW is equal to or greater than 9,250 lb/hr,
 $E = 1.10(PW)^{0.25}$

Performance Testing

- 2.12 If performance testing is required, the permittee shall provide notice of intent to test to DEQ at least 15 days prior to the scheduled test or shorter time period as provided in a permit, order, consent decree, or by DEQ approval. DEQ may, at its option, have an observer present at any emissions tests conducted on a source. DEQ requests such testing not be performed on weekends or state holidays.

All testing shall be conducted in accordance with the procedures in IDAPA 58.01.01.157. Without prior DEQ approval, any alternative testing is conducted solely at the permittee's risk. If the permittee fails to obtain prior written approval by DEQ for any testing deviations, DEQ may determine that the testing does not satisfy the testing requirements. Therefore, prior to conducting any performance test, the permittee is encouraged to submit in writing to DEQ, at least 30 days in advance, the following for approval:

- The type of test method to be used
- Any extenuating or unusual circumstances regarding the proposed test
- The proposed schedule for conducting and reporting the test

Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units

- 2.13 The permittee shall operate all affected boilers at the facility in accordance with 40 CFR Part 60, Subpart Dc. For the purposes of this section of the operating permit and in accordance with 60.40c, an affected boiler is defined as any boiler with a maximum design heat capacity greater than or equal to 10 MMBtu/hr and less than or equal to 100 MMBtu/hr that was constructed, modified, or reconstructed after June 9, 1989.
- 2.13.1 The permittee shall comply with the sulfur dioxide standards in accordance with 40 CFR 60.42c(d). The sulfur limits apply at all times, including periods of startup, shutdown, and malfunction.
- 2.13.2 When combusting oil in an affected boiler that has a heat input capacity of greater than or equal to 30 MMBtu/hr, opacity shall not exceed 20% (six-minute average), except for one six-minute period per hour of not more than 27% opacity. The opacity standard applies at all times, except during periods of startup, shutdown, or malfunction.

- 2.13.3 The permittee shall maintain documentation supporting 40 CFR Part 60, Subpart Dc applicability determinations for each boiler at the facility. The documentation may include, but is not limited to, the following: date the boiler was constructed, date the boiler was modified or reconstructed as defined in 40 CFR 60.14 and 60.15, maximum design heat input capacity of the boiler, and/or fuel burned.
- 2.13.4 The permittee shall obtain certifications from the fuel supplier stating that oil supplied for the affected boilers complies with specifications of the distillate oil or residual oil definitions in 40 CFR 60.41c. The most recent five-year compilation of data shall be kept onsite and shall be made available to DEQ representatives upon request.
- 2.13.5 Compliance with particulate matter (PM) and opacity standards under 40 CFR 60.43c shall be determined in accordance with 40 CFR 60.45c and as required in 40 CFR 60.8, and IDAPA 58.01.01.157.
- 2.13.6 The permittee shall record and maintain records of the amounts of each fuel combusted in each affected boiler during each day. The most recent five-year compilation of data shall be kept onsite and shall be made available to DEQ representatives upon request.
- 2.13.7 For all affected boilers at the facility, the permittee shall comply with all applicable reporting and recordkeeping requirements in accordance with 40 CFR 60.48c.

Volatile Organic Liquid Storage Vessels

- 2.14 In accordance with 40 CFR 60.110.b(a), this subpart applies to each storage vessel with a capacity greater than or equal to 75 m³ that is used to store volatile organic liquids for which construction, reconstruction, or modification is commenced after July 23, 1984.
- 2.14.1 In accordance with 40 CFR 60.110.b(b), this subpart does not apply to storage vessels with a capacity greater than or equal to 151 m³ storing a liquid with a maximum true vapor pressure less than 3.5 kPa or with a capacity greater than or equal to 75 m³ but less than 151 m³ storing a liquid with a maximum true vapor pressure less than 15.0 kPa.
- 2.14.2 In accordance with 40 CFR 60.110.b(d), this subpart does not apply to storage vessels meeting the definitions of §60.110.b(d)(1) thru §60.110.b(d)(8).
- 2.14.3 In accordance with 40 CFR 60.116.b(b), the owner or operator of each storage vessel as specified in §60.110b(a) shall keep readily accessible records showing the dimension of the storage vessel and an analysis showing the capacity of the storage vessel.

National Emission Standards for Emissions of Radionuclides other than Radon from Department of Energy Facilities

- 2.15 Emissions of radionuclides to the ambient air from Department of Energy facilities shall not exceed those amounts that would cause any member of the public to receive, in any year, an effective dose equivalent of 10 millirem per year (mrem/yr).
- 2.15.1 In accordance with 40 CFR 61.93, the permittee shall determine radionuclide emissions and calculate effective dose equivalent values to members of the public using EPA-approved methods.
- 2.15.2 The permittee shall submit annual reports and maintain records documenting radionuclide emissions and effective dose equivalent values in accordance with 40 CFR 61.94 and 61.95.
[40 CFR 61, Subpart H]

National Emission Standard for Asbestos

- 2.16 The permittee shall comply with the following:
- 2.16.1 Any renovation or demolition activity planned at the facility shall be conducted in accordance with 40 CFR 61.145. New materials to be used during any renovation at the facility shall comply with standards given in 40 CFR 61.146 for spray-on materials and 40 CFR 61.148 for insulating materials.
- 2.16.2 Waste disposal for demolition, renovation, and spraying operations shall be conducted in accordance with 40 CFR 61.150 in prevention of visible emissions to the outside air of any asbestos-containing material. Air cleaning during demolition and renovation activities shall be conducted in accordance with 40 CFR 61.152. Reporting shall occur in accordance with 40 CFR 61.153.
- 2.16.3 The permittee shall operate active waste disposal facilities for asbestos-containing material in accordance with 40 CFR 61.154.

National Emission Standards for Hazardous Air Pollutants from Off-Site Waste and Recovery Operations

- 2.17 In accordance with 40 CFR 63 Subpart DD, the owner or operator of affected sources subject to this subpart is exempted from the requirements of §63.682 through §63.699 when the total annual quantity of the HAP contained in the off-site material received at the plant is less than one megagram per year. The definition of off-site material is specified in §63.680(b). The owner or operator must meet the requirements contained in §63.680(d)(1) through §63.680(d)(3) to qualify for this exemption as follows:
- 2.17.1 In accordance with §63.680(d)(1), the owner or operator must prepare an initial determination of the total annual HAP quantity in the off-site material received at the plant site.

- 2.17.2 In accordance with §63.680(d)(2), the owner or operator must prepare a new determination whenever the extent of changes to the quantity or composition of the off-site material received at the plant site could cause the total annual HAP quantity to exceed the one megagram per year limit.
- 2.17.3 In accordance with §63.680(d)(3), the owner or operator must maintain documentation of the determination of the total HAP quantity in the off-site material received at the plant. This documentation must include the basis and data used for determining the HAP content of the off-site material.

National Emission Standards for Wood Furniture Manufacturing Operations

- 2.18 In accordance with 40 CFR 63 Subpart JJ, the owner or operator may be exempted from this subpart provided the following requirements are met:
- 2.18.1 In accordance with §63.801(a), the owner or operator meets the definition of a incidental wood manufacture which means a major source that is primarily engaged in the manufacture of products other than wood furniture or wood furniture components and that uses no more than 100 gallons per month of finishing material or adhesives in manufacture of wood furniture or wood furniture components.
- 2.18.2 In accordance with §63.800(a), the owner or operator shall maintain purchase or usage records to demonstrate that total monthly usage rates of finishing material or adhesives are less than 100 gallons per month. In accordance with §63.801(a), finishing materials are defined as materials which include, but are not limited to, coatings, stains, basecoats, washcoats, enamels, sealers, and topcoats.

[40 CFR 63, Subpart JJ]

Regulated Substances for Accidental Release Prevention

- 2.19 An owner or operator of a stationary source that has more than a threshold quantity of a regulated substance in a process, as determined under 40 CFR 68.115, shall comply with the requirements of the Chemical Accident Prevention Provisions 40 CFR 68 no later than the latest of the following dates:
- 2.19.1 Three years after the date on which a regulated substance present above a threshold quantity is first listed under 40 CFR 68.130.
- 2.19.2 The date on which a regulated substance is first present above a threshold quantity in a process.

- 2.21 The permittee shall comply with applicable standards for recycling and emissions reduction pursuant to 40 CFR 82, Subpart F, Recycling and Emissions Reduction.

[40 CFR 82, Subpart F]

Monitoring and Recordkeeping

- 2.22 The permittee shall maintain sufficient recordkeeping to assure compliance with all of the terms and conditions of this operating permit. Records of monitoring information shall include, but not be limited to, the following: (a) the date, place, and times of sampling or measurements; (b) the date analyses were performed; (c) the company or entity that performed the analyses; (d) the analytical techniques or methods used; (e) the results of such analyses; and (f) the operating conditions existing at the time of sampling or measurement. All monitoring records and support information shall be retained for a period of at least five years from the date of the monitoring sample, measurement, report, or application. Supporting information includes, but is not limited to, all calibration and maintenance records, all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by this permit. All records required to be maintained by this permit shall be made available in either hard copy or electronic format to DEQ representatives upon request.

The permittee is not required to conduct the monitoring and associated recordkeeping for any emission unit if the emission unit did not operate at any time between required monitoring events, provided the following conditions are met:

- a) in the case of a permanent shut down of the emission unit:
 - i) the permittee makes a contemporaneous record in a log or file maintained on site of the date that the emission unit ceased operation.
- b) in the case of a temporary shut down of the emission unit:
 - i) the permittee makes a contemporaneous record in the log or file maintained on site of the date that the emission unit ceased operation and the reason why the emission unit did not operate.
 - ii) the permittee makes a contemporaneous record in a log or file maintained on site of the date that the emission unit resumed operation.

3. MATERIALS AND FUELS COMPLEX (FORMERLY ANL-W)

3.1 Boilers

Summary Description

Emissions of NO_x emissions from several sources at the INL facility are regulated in PTC No. P-020521, which was issued to DOE on December 1, 2003. Included in this permit are four boilers – Materials and Fuels Complex (MFC). All boilers were constructed prior to 1974. All boilers are pre-ignited with propane and operated on No. 2 fuel oil.

In addition to the facility-wide conditions listed in Section 2 of this permit, Table 3.1 contains additional requirements that apply to the MFC.

^a tons per consecutive 12-month period

^b As determined by a pollutant-specific EPA reference method, DEQ-approved alternative, or as determined by the DEQ's emissions estimation methods used in this permit analysis.

^c As determined by multiplying the actual or allowable (if actual is not available) pound-per-hour emissions rate by the allowable hours per year that the process(es) may operate(s), or by actual annual production rates.

[PTC No. 011-00022, 2/20/03]

Operating Requirements

- 3.2.2 Only those paints and solvents as submitted in the permit application, or comparable replacements, which comply with the emissions limits in Permit Condition 3.2.1 of this permit may be used in the utility paint spray booth unless prior DEQ approval is obtained.

[PTC No. 011-00022, 2/20/03]

- 3.2.3 Within 60 days of February 20, 2003, the permittee shall have developed an O&M manual for the exhaust filter. This manual shall contain, at a minimum, the filter replacement schedule. The manual shall remain on site and be made available to DEQ representatives upon request.

[PTC No. 011-00022, 2/20/03]

- 3.2.4 The utility paint spray booth shall not be operated unless all exhaust filters are in place and intact.

4.1 Boiler CFA-609-005**Summary Description**

The following is a narrative description of Boiler CFA-609-005 regulated in this Tier I operating permit. This description is for informational purposes only. Boiler CFA-609-005 has a rated capacity of 2.092 MMBtu/hr. There are no control devices for this emissions unit. The most recent permit (PTC No. 023-00001) for this boiler was issued to DOE on February 14, 1996, and in the PTC this boiler is referred to as Cleaver Brooks boiler CB-101-50.

Permit Limits/Standard Summary**Emissions Limits**

- 4.1.1 Particulate matter emissions from boiler CFA-609-005 shall not exceed any corresponding emission rate limit listed in Table 4.2.

Summary Description

The following is a narrative description of the NO_x sources regulated at CFA. This description is for informational purposes only. Emissions of NO_x from several sources at the DOE facility, including boilers at the CFA, are regulated in PTC No. P-020521 issued to DOE on December 1, 2003. There are no control devices associated with these boilers. Included in this permit are the following boilers located at CFA:

5. IDAHO NUCLEAR TECHNOLOGY AND ENGINEERING CENTER (INTEC)**5.1 Building CPP-606 Distillate Oil-fired Boilers****Summary Description**

The following is a narrative description of the emissions sources in Building CPP-606 regulated in this Tier I operating permit. This description is for informational purposes only.

Building CPP-606 includes four boilers with a rated capacity of 36.4 MMBtu/hr each. A flue gas recirculator (FGR) on each boiler provides NO_x emissions control.

In addition to the facility-wide permit conditions listed in Section 2 of this permit Table 5.1 contains a summary of additional requirements that apply to the boilers located at Building CPP-606.

[PTC No. P-030505, 1/21/04]

- 5.1.2 In accordance with IDAPA 58.01.01676 (Rules for the Control of Air Pollution in Idaho), the permittee shall not discharge into the atmosphere from the Building CPP-606 boilers stacks any gases that contain particulate matter emissions in excess of 0.05 grains per dry standard cubic foot (gr/dscf) corrected to 3% oxygen.

[PTC No. P-030505, 1/21/04]

- 5.1.3 The permittee shall not discharge into the atmosphere from the Building CPP-606 boilers stacks or any other stack, vent, or functionally equivalent opening, emissions that exceed 20% opacity for a period or periods aggregating more than three minutes in any 60-minute period, as required by IDAPA 58.01.01.625. Opacity shall be determined by the procedures contained in IDAPA 58.01.01.625.

[PTC No. P-030505, 1/21/04]

- 5.1.4 In accordance with 40 CFR 60.43c, the permittee shall not discharge into the atmosphere from the Building CPP-606 boilers stacks any gases that exhibit greater than 20% opacity (six-minute average), except for one six-minute period per hour of not more than 27% opacity. The opacity standard shall apply at all times except during periods of startup, shutdown, or malfunction. Opacity shall be determined by the procedures contained in IDAPA 58.01.01.625 and as specified in 40 CFR Part 60.

[PTC No. P-030505, 1/21/04]

Operating Limits

- 5.1.5 The permittee shall combust distillate oil only in the Building CPP-606 boilers. The distillate oil combustion in these boilers shall not contain greater than 0.3 weight percent sulfur.

[PTC No. P-030505, 1/21/04]

- 5.1.6 In accordance with 40 CFR 60.42c(d), as an alternative to operating continuous emission monitor, the permittee shall not combust distillate oil that contains greater than 0.5 weight percent sulfur in the Building CPP-606 boilers. In accordance with 40 CFR 60.41c, distillate oil means fuel oil that complies with the specification for fuel oil numbers 1 or 2, as defined by the American Society for Testing and Materials in ASTM D396-78, "Standard Specification for Fuel Oils".

[PTC No. P-030505, 1/21/04]

- 5.1.7 The total amount of boiler fuel combusted for all Building CPP-606 boilers shall not exceed 20,736 gallons per day.

Monitoring, Recordkeeping, and Reporting Requirements

- 5.1.8 To demonstrate compliance with Sections 5.1.5 and 5.1.6 of this permit, the fuel oil supplier shall certify all boiler fuel combusted in the Building CPP-606. In accordance with 40 CFR 60.48c(f), fuel oil supplier certification shall include the name of the fuel oil supplier, and a statement from the fuel oil supplier that the fuel oil complies with the specifications under the definition of distillate oil in 40 CFR 60.41c. The permittee shall also maintain documentation of the fuel sulfur content of oil used in the boilers. All records shall be maintained for a period of five years.

[PTC No. P-030505, 1/21/04 & IDAPA 58.01.01.322.06, 5/1/94]

- 5.1.9 In accordance with 40 CFR 60.48c(g), the permittee shall monitor and record the amount of boiler fuel combusted in the Building CPP-606 boilers. The amount of boiler fuel combusted shall be recorded as gallons per day (gal/day), in a log, kept at the facility for the most recent five-year period. The log shall be available to DEQ representatives upon request.

[PTC No. P-030505, 1/21/04]

- 5.1.10 In accordance with 40 CFR 60.44c(h), the performance test to demonstrate compliance with Section 5.1.6 of this permit shall consist of certification from the fuel supplier. In accordance with 40 CFR 60.48c(f), fuel supplier certification shall include the following information for distillate oil: (1) the name of the oil supplier; and (2) a statement from the oil supplier that the oil complies with the specifications under the definition of distillate oil in 40 CFR 60.41c.

[PTC No. P-030505, 1/21/04]

- 5.1.11 In accordance with 40 CFR 60.48c(d), the permittee shall submit semi-annual reports to EPA Region 10 and to DEQ. In accordance with 40 CFR 60.48c(j), the reporting period for the reports required under this subpart is each six-month period. All reports shall be submitted to EPA Region X and to DEQ and shall be postmarked by the 30th day following the end of the reporting period. Each submitted semi-annual reports shall contain the information required by 40 CFR 60.48c(e), as applicable.

[PTC No. P-030505, 1/21/04]

- 5.1.12 In accordance with 40 CFR 60.48c(i), the permittee shall maintain all records of the information required by 40 CFR 60.48c(e). The permittee shall maintain the records for a period of five years following the date of such record.

5.2 *Idaho Nuclear Technology and Engineering Center (INTEC), Nitrogen Oxide Sources*

Summary Description

On December 1, 2003, DEQ issued a permit to construct to the U.S. Department of Energy INTEC facility for several sources. The permit was issued to three categories of emissions units. The categories are: Fluorinel and Storage Facility (FAST); LET&D, Ventilation Air System, and Process Off-Gas System; and INL-Wide NO_x Sources.

Liquid Effluent Treatment and Disposal Facility, Ventilation Air System, and Process Off-gas System

The following is a narrative description of some of the permitted emissions units at INTEC regulated in this Tier I operating permit. This description is for informational purposes only.

Three separate systems exhaust to the INTEC main stack: the LET&D system, the ventilation air system, and the process off-gas system. In addition to the pollution control systems for the main stack, individual processes have additional pollution control equipment.

The LET&D system treats the process equipment waste evaporator condensate, which is a low-level liquid waste, by an acid fractionation process. The acid portion or bottoms are stored in the tank farm. The remaining gaseous overheads are discharged to the main stack. The gaseous overheads produced in the fractionation process are processed through one of two parallel off-gas trains. These trains consist of a mist eliminator, a superheater, two banks of HEPA filters, and a blower. Liquid droplets are removed by mist eliminators and returned to the fractionators. The gas is then heated to ensure there is no liquid water in the stream. The HEPA filters remove solids. There are two HEPA filter banks, one must operate whenever a fractionator operates. Each bank consists of two filter stages in series, with each stage containing two HEPA filters. The blower discharges the effluent into the atmosphere through the main stack.

The ventilation air system is comprised of ventilation air from several buildings in the INTEC facility. The air is used to heat, ventilate, and to provide contamination control for these facilities. The air, which comprises the bulk of the flow to the main stack, passes through the VAPS system. The VAPS system consists of a fiberglass bed prefilter, HEPA filters arranged in 26 parallel banks of four filters, and three blowers. The blowers discharge the effluent into the atmosphere through the main stack.

The PAPS flow is comprised of off-gas from the dissolver off-gas, the vessel off-gas system (including the tank farm facility, process equipment waste evaporator, fuel processing facilities, and pilot plant facilities), the NWCF off-gas system (including the NWCF calcination process (currently shut down by a consent order) and the evaporator tank system (a.k.a. high-level liquid waste evaporator system), and vents from bin sets 1, 2, and 3. The PAPS system consists of mist eliminator, a superheater, and a single stage of HEPA filters. Exhaust gases are discharged into the atmosphere through the main stack.

Emissions Limits

- 5.2.1 NO_x emissions shall not exceed 472 lb/hr, as determined by the in-stack continuous emission-monitoring system (CEMS), by approved U.S. EPA Reference Methods or approved alternative. Because the NWCF is the only substantial contributor of NO_x emissions to the main stack, continuous emission monitoring for NO_x is required only when the NWCF is operating. Annual NO_x emissions shall not exceed 1700 T/yr, as determined by summing the actual hourly emissions as shown by the CEMS and the results of any other emissions estimation methods that were used.

			Date Expires:	June 28, 2010

Monitoring Requirements

- 5.2.2 The permittee shall maintain and operate an in-stack CEMS (continuous emissions monitor system) for the measurement of nitrogen oxides and gas flow rate at the main stack. The CEMS is required to be operated only while the NWCF is operating. The CEMS shall meet the requirements specified in 40 CFR 60, Appendix B. The permittee will maintain documentation that describes quality assurance procedures and maintenance procedures.

[PTC No. P-020521, 12/1/03]

- 5.2.3 DOE may continue to operate the Calciner at the New Waste Calcining Facility (NWCF) until June 1, 2000. Unless, and until, DEQ has issued a hazardous waste permit for its continued operation, after June 1, 2000, the Calciner shall be in standby mode. At such time as DOE decides to operate or close the Calciner, which shall be no later than June 1, 2000, DOE shall provide written notice of its decision to DEQ and EPA. Based on this decision, DOE shall either: (a) submit a closure plan to DEQ for approval for closure of the Calciner system(s) under the requirements of IDAPA 16.01.05.009 [40 CFR Part 265, Subpart G] within 90 days of the written notice, or (b) submit a schedule to DEQ for review and approval within 30 days of the written notice for submittal of a permit application for the Calciner system(s). DOE must comply with all applicable permitting requirements of IDAPA 16.01.05.008, .012 [40 CFR Parts 264 and 270] prior to operating the Calciner. In the event that a decision is made to operate the Calciner, the Calciner shall remain in standby mode until a final permit decision is made by DEQ pursuant to the procedures of IDAPA 16.01.05.013 [40 CFR 124]. Routine repair, replacement, and maintenance of the Calciner will not be deemed operation of the Calciner. Such activities may be conducted while the Calciner is in standby mode.

6. CRITICAL INFRASTRUCTURE TEST RANGE COMPLEX/POWER BURST FACILITY (FORMERLY WROC)

Summary Description

The following is a narrative description of the currently permitted emissions unit at the Critical Infrastructure Test Range Complex/Power Burst Facility (CITRC/PBF) regulated in this Tier I operating permit. This description is for informational purposes only.

PTC No. P-020521 was issued by DEQ December 1, 2003. The INTEC NO_x sources PTC is an INL site-wide permit that sets limits for NO_x emissions from specified boilers. The source identified at the CITRC/PBF affected by the site-wide PTC is a Cyclotherm commercial heating boiler, PBF-620 M-31, in the Power burst Facility (PBF) reactor building PBF-620. The rated capacity is 1.6 MMBtu/hr with a pressure-atomizing burner type. Boiler PBF-620 M-31 is ignited by propane and fueled with No. 2 fuel oil. Neither emissions control equipment nor emissions monitoring equipment are installed for operation of the boiler.

In addition to the facility-wide conditions listed in Section 2 of this permit, Table 6.1 contains additional requirements that apply to the CITRC/PBF.

Table 6.1 APPLICABLE REQUIREMENTS SUMMARY

The following is a narrative description of the permitted emissions units at NRF regulated in this Tier I operating permit. This description is for informational purposes only.

Boiler House, NRF-620, houses three boilers and the associated support equipment used in providing heat in the form of steam for the NRF buildings. The rated capacity for each boiler is 40,000 lb/hr of steam based on continuous load. The boilers are pre-ignited with propane and burn ASTM grade number 1, 2, and 4 fuel oils alone or as a mixture based upon ASTM standards for fuel oils.

In addition to the facility-wide conditions listed in Section 2 of this permit, Table 7.1 contains additional requirements that apply to the NRF.

8. TEST AREA NORTH (TAN)***Summary Description***

Test Area North (TAN) is in the northern part of the INL site and presently consists of three operational areas: the Technical Support Facility (TSF), the Specific Manufacturing Capability (SMC) facility, and the Water Reactor Research Test Facility (WRRTF). A private contractor operates each of the operational areas at TAN on behalf of DOE-ID.

The TSF area functions as the administrative and support hub of TAN and houses many important programs, including a Hot Shop and cells for remote disassembly and repair of radioactive assemblies. Assembly crafts and maintenance for TAN/TSF is centered at TSF.

The SMC is a state-of-the-art research and manufacturing complex. The SMC includes a multiphased manufacturing operation that produces fabricated metal assemblies. Radionuclide emissions from SMC are generally limited to those present in depleted uranium. Facilities that support SMC operations are located at the CTF area of TAN. The SMC project supports two major process areas: (a) TAN 629 Fabrication and Assembly; and (b) TAN 679 Rolling Operations.

It is noted that when DEQ requests classified records, the records shall be made available only to DEQ representatives with appropriate national security clearances and a need to know, in accordance with federal regulations. Table 8.1 contains a summary of the requirements that apply to TAN. Specific permit requirements are listed below the Table.

- 8.7.3 No more than 93,333 gallons per month or 1,120,000 gallons per consecutive 12-month period of fuel oil shall be burned in Boiler No. 4 and Boiler No. 5.

[PTC No. 023-00001, 5/14/98]

Monitoring, Recordkeeping and Reporting Requirements

- 8.7.4 The permittee shall monitor and record the amount, in gallons, of fuel oil combusted in Boiler No. 4 and Boiler No. 5 monthly and per each consecutive 12-month period. All data shall be maintained onsite for the most recent five-year period and shall be made available to DEQ representatives upon request.

[PTC No. 023-00001, 5/14/98]

- 8.7.5 The permittee shall require the vendor of the fuel oil to certify that each load received has a 0.5 weight percent or less of sulfur in accordance with 40 CFR 60, Subpart Dc. All data shall be obtained and maintained, for the most recent five-year period, and made available to DEQ representatives upon request.

9. REACTOR TECHNOLOGY COMPLEX (FORMERLY TRA)**9.1 RTC – Diesel Powered Generators****Summary Description**

Reactor Technology Complex (RTC) utilizes three electrical generator units (Units 674-M-6, 670-M-42, and 670-M-43) powered by large stationary diesel engines. The primary purpose of the RTC generators is to provide electrical power to the Advanced Test Reactor (ATR) and/or RTC during normal operations, off-normal operations, and emergency operation.

Emissions Limits

- 9.1.1 The combined NO_x emissions from the 674-M-6, 670-M-42, and 670-M-43 generator stacks shall not exceed the emissions rate limit listed in Table 9.1 in any consecutive 12-month period.

Source Description	NO _x
	T/yr
Combined Emissions – RTC Generators	119.5

[PTC No. P-000534, 5/18/04]**Operating Limits**

- 9.1.2 The permittee shall only combust Grade 1 and/or Grade 2-distillate fuel oil (diesel fuel) in the three generators.

[PTC No. P-000534, 5/18/04]

- 9.1.3 The maximum annual combined throughput of fuel oil to the 674-M-6, 670-M-42, and 670-M-43 generators shall not exceed 544,522 gallons per consecutive 12-month period.

[PTC No. P-000534, 5/18/04]

- 9.1.4 The sulfur content in the No. 1 fuel oil (ASTM Grade 1) supplied to the three generators shall not exceed 0.3% by weight as required in IDAPA 58.01.01.728.

The sulfur content in the No. 2 fuel oil (ASTM Grade 2) supplied to the three generators shall not exceed 0.5% by weight as required in IDAPA 58.01.01.728.

Monitoring, Recordkeeping, and Reporting Requirements

9.1.5 By May 18, 2005, the permittee shall conduct two performance tests to measure NO_x emissions from the 674-M-6 stack and either the 670-M-42 or 670-M-43 stack using EPA Reference Method 7 or 7E. The results of the test will be used to verify the NO_x emission factor for these units. The tests shall be conducted while the permittee is combusting ASTM Grade 2 fuel oil. This performance test, and any subsequent performance test, shall be performed in accordance with IDAPA 58.01.01.157 and the following requirements:

- Visible emissions shall be observed during each performance test run using the methods specified in IDAPA 58.01.01.625.
- The throughput of diesel fuel to the generator being tested shall be recorded in gallons per hour during each performance test run.

The results of the NO_x testing shall be reported in pounds emitted per million British thermal units (lb/MMBtu) of fuel to compare with the NO_x emission factor (3.2 lb/MMBtu) used to establish the emissions limit in Permit Condition 9.1.1.

[PTC No. P-000534, 5/18/04]

9.1.6 For each month, the permittee shall monitor and record the aggregate throughput of fuel oil to generators 674-M-6, 670-M-42, and 670-M-43 for that month and for the most recent consecutive 12-month period. A compilation of the most recent five years of records shall be kept onsite and shall be made available to DEQ representatives upon request.

11. ADVANCED MIXED WASTE TREATMENT PROJECT**Summary Description**

The AMWTP is underway in response to the 1995 Settlement Agreement between the state of Idaho and the DOE. The settlement agreement directed DOE to ship the currently estimated 65,000 m³ of TRU waste now located at INL to the WIPP or other such facility designated by DOE, by a target date of December 31, 2015, but no later than December 31, 2018. Much of this waste requires treatment before it will be accepted for disposal at the WIPP in New Mexico. DOE contracted with BNFL, Inc. to construct the AMWTP to treat the waste so it will be accepted at WIPP.

The AMWTP will treat mixed waste, TRU waste and alpha-emitting mixed low-level waste. The project includes:

- retrieving stored waste;
- characterizing the waste for storage, treatment, or disposal;
- storing the waste in preparation for treatment or pretreatment (as required);
- pretreating and/or treating the waste in the AMWTF (if necessary); and
- certifying the waste for shipment to WIPP or another waste management unit.

The overall AMWTP includes the AMWTF and the TSA-RE. The AMWTF is specific to the treatment building, along with other buildings and associated activities. The AMWTF is located at the RWMC on the southern portion of the 56-acre TSA. The waste that requires retrieval is located in the TSA-RE just west of the AMWTF. The TSA-RE encloses asphalt pads which support primarily earthen-covered stacks of retrievably mixed waste.

Permit Limits/Standard Summary-TSA-RE**Emissions Limits and Operating Requirements**

- 11.1 The permittee shall limit NO_x emissions from the diesel powered soil vacuum and from mobile equipment operating within the TSA-RE to levels not exceeding the limits established in Table 11.2. The NO_x limit applies to equipment used to move soil and retrieve waste within the TSA-RE. The NO_x limit does not apply to dump trucks, tugs, yard cranes, and other equipment that enters the TSA-RE to move soil, retrieve waste, or other materials from the TSA-RE to another location outside of the TSA-RE.

- 11.2 The permittee shall combust propane exclusively in the 2.5 MMBtu/hr indirect-fired heater at the facility.

[PTC No. 023-00001, 1/27/03]

- 11.3 The amount of propane combusted in the indirect-fired heater shall not exceed 5.44 million cubic feet in any consecutive 12-month period.

[PTC No. 023-00001, 1/27/03]

Monitoring and Recordkeeping Requirements

- 11.4 The permittee shall monitor and record on a monthly basis the hours of operation for each piece of equipment that operates inside the TSA-RE. The permittee shall also monitor and record the hours of operation on a monthly basis for the 360-horsepower soil vacuum. These records shall be kept onsite for the most recent five-year period and shall be made available to DEQ representatives upon request.

12. TIER I OPERATING PERMIT GENERAL PROVISIONS

General Compliance

1. The permittee shall comply with all conditions of this permit. Any permit noncompliance constitutes a violation and is grounds for enforcement action, for permit termination, revocation and reissuance, revision, or for denial of a permit renewal application.
[IDAPA 58.01.01.322.15.a, 5/1/94; 40 CFR 70.6(a)(6)(I)]
2. It shall not be a defense in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the terms and conditions of this permit.
[IDAPA 58.01.01.322.15.b, 5/1/94; 40 CFR 70.6(a)(6)(II)]
3. Any permittee who fails to submit any relevant facts or has submitted incorrect information in a permit application shall, upon becoming aware of such failure or incorrect submittal, promptly submit such supplementary facts or corrected information.
[IDAPA 58.01.01.315.01, 5/1/94; 40 CFR 70.5(b)]

Reopening

4. This permit may be revised, reopened, revoked and reissued, or terminated for cause. Cause for reopening exists under any of the circumstances listed in IDAPA 58.01.01.386. Proceedings to reopen and reissue a permit shall follow the same procedures as apply to initial permit issuance and shall affect only those parts of the permit for which cause to reopen exists. Such reopening shall be made as expeditiously as practicable in accordance with IDAPA 58.01.01.360 through 369.
[IDAPA 58.01.01.322.15.c, 5/1/94; IDAPA 58.01.01.386, 3/19/99; 40 CFR 70.7(f)(1) and (2); 40 CFR 70.6(a)(6)(III)]
5. The filing of a request by the permittee for a permit revision, revocation and reissuance, termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition.
[IDAPA 58.01.01.322.15.d, 5/1/94; 40 CFR 70.6(a)(6)(III)]

Property Rights

6. This permit does not convey any property rights of any sort, or any exclusive privilege.
[IDAPA 58.01.01.322.15.e, 5/1/94; 40 CFR 70.6(a)(6)(IV)]

Information Requests

7. The permittee shall furnish within a reasonable time, all information requested in writing by DEQ to determine whether cause exists for modifying, revoking and reissuing, terminating the permit, or determining compliance with the permit.
[Idaho Code §39-108; IDAPA 58.01.01.122, 5/1/94 and 322.15.f, 4/5/00; 40 CFR 70.6(a)(6)(v)]

Changes Requiring Permit Revision or Notice

10. The permittee may not commence construction or modification of any stationary source, facility, major facility, or major modification without first obtaining all necessary permits to construct or an approval under IDAPA 58.01.01.213, or complying with IDAPA 58.01.01.220 through 223. The permittee shall comply with IDAPA 58.01.01.380 through 386 as applicable.

Federal and State Enforceability

12. Unless specifically identified as a state-only provision, all terms and conditions in this permit, including any terms and conditions designed to limit a source's potential to emit, are enforceable: (i) By DEQ in accordance with state law; and (ii) By the United States or any other person in accordance with federal law.

[IDAPA 58.01.01.322.15.j, 5/1/94; 40 CFR 70.6(b)(1)(2)]

13. Provisions specifically identified as a state-only provision are enforceable only in accordance with state law. State-only provisions are those that are not required under the federal Clean Air Act, or under any of its applicable requirements or those provisions adopted by the state prior to federal approval.

Inspection and Entry

14. Upon presentation of credentials, the permittee shall allow DEQ, or an authorized representative of DEQ, to do the following:
- Enter upon the permittee's premises where a Tier I source is located or emissions related activity is conducted, or where records are kept under conditions of this permit.
 - Have access to and copy, at reasonable times, any records that are kept under the conditions of this permit.
 - Inspect at reasonable times any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under this permit.
 - As authorized by the Idaho Environmental Protection and Health Act, sample or monitor at reasonable times substances or parameters for the purpose of determining or ensuring compliance with this permit or applicable requirements.
 - DEQ, or its authorized representative, understands that certain INL areas may require personnel controls including, but not limited to, qualified escorts, security clearances, radiological training, and safety training.

Periodic Compliance Certification

- 21.
 - a. The permittee shall submit compliance certifications during the term of the permit for each emissions unit to DEQ and the EPA as follows:
 - b. Unless specified elsewhere in this permit compliance certifications shall be submitted for all emissions units for the period from January 1 to December 31 of each year . The compliance certifications shall be submitted no later than February 28 of each year.
 - c. The compliance certification for each emissions unit shall address all of the terms and conditions contained in the Tier I operating permit that are applicable to such emissions unit including emissions limitations, standards, and work practices;
 - d. The compliance certification shall be in an itemized form providing the following information (provided that the identification of applicable information may cross-reference the permit or previous reports as applicable):
 - i. The identification of each term or condition of the Tier I operating permit that is the basis of the certification;
 - ii. The identification of the method(s), or other means, used by the owner or operator for determining the compliance status with each term and condition during the certification period. Such methods and other means shall include, at a minimum, the methods and means required by this Tier I operating permit.
 - iii. The status of compliance with the terms and conditions of the permit for the period covered by the certification, including whether compliance during the period was continuous or intermittent. The certification shall be based on the method or means designated in paragraph 21.d.ii above. The certification shall identify each deviation and take it into account in the compliance certification. The certification shall also identify, as possible exceptions to compliance, any periods during which compliance is required and in which an excursion or exceedance as defined under 40 CFR Part 64 occurred;
 - iv. Such other facts as DEQ may require to determine the compliance status of the source.
